AdStop

Your Home Digital Shield

The plug-and-play device that blocks ads, trackers, and unwanted content across your entire home network. No technical skills required.

10,000+	< 2 min	25+	2W
DNS queries blocked daily	Setup time	Router brands supported	Power consumption

The Problem

Most households have no control over ads, trackers, and unwanted content.

Every connected device in your home is exposed to ads, trackers, and potentially harmful content — and most people have no way to stop it without technical expertise.

Smart TV

No ad-blocker available. Ads play before every video, with no way to skip or block.

Smartphone

Ad-blockers only work in one app or browser. Most in-app ads can't be blocked.

Console

PlayStation, Xbox, Nintendo: impossible to install any extension or ad-blocker.

PC & Tablet

Requires setup on every device and every browser. Family members forget.

How It Works

Immediate setup, no technical skills required.

01

Connect

Plug AdStop into power near your router. A setup network appears. Connect from your phone and enter your WiFi credentials via a simple captive portal.

02

Auto-Configure

AdStop connects to your network and configures itself as the DNS server. It auto-detects your router brand and applies optimal settings.

03

Protected

From that moment, every device on your network is automatically protected. No apps to install, no settings to change, nothing to maintain.

✓ Average setup time: under 2 minutes. Supports 25+ router brands including major Italian ISPs.

What's Inside

Compact, efficient, and built on proven open-source technology.

On-Board Hardware

AdStop is built around a Raspberry Pi Zero 2W, a compact and energy-efficient single-board computer. It features a 2.13" e-ink display that shows blocking statistics with near-zero power consumption.

The software stack leverages proven open-source DNS filtering technology, enhanced with custom Rust networking components, a Python captive portal, and a proprietary cloud management system.

- Raspberry Pi Zero 2W (ARM Cortex-A53)
- Waveshare 2.13" e-ink display (250x122)
- SanDisk 32GB microSD (Class A1)
- 5V 2.5A power supply
- Custom 3D-printed PLA case

~35€
Hardware Cost

Per unit at volume
(~55€ prototype)

2W
Power Draw

Minimal energy impact
on your electricity bill

24/7
Always On

Silent operation,
no maintenance needed

Why It's Different

AdStop works at the network level, before ads even reach your devices.

AdStop blocks unwanted DNS requests upstream — before they reach any device on your network.

Smart TV

No extensions possible.
AdStop protects natively.

Game Console

PS5, Xbox, Switch —
all automatically protected.

Smartphones

Full protection without
installing any app.

PCs & Tablets

No per-device setup.
One device protects all.

Traditional ad-blockers: per-device, per-browser, manual setup. AdStop: one device, whole network, zero configuration.

What It Can Block

A complete shield for the whole family, fully configurable from the app.

Advertisements

Banners, pre-roll videos, popups, and sponsored content across every platform and device.

Trackers

Tracking scripts that collect data about your online behavior, browsing habits, and personal info.

Gambling

Betting sites and online casinos. Ideal for protecting younger family members.

Adult Content

Configurable safe-browsing filter for the entire family. Enable or disable via the app.

Social Media

Block access to social platforms to reduce distractions during study or work hours.

All categories can be enabled or disabled independently from the mobile app.

The Control App

Complete management in the palm of your hand.

App in active development

Real-Time Statistics

View how many ads and trackers have been blocked today, this week, and this month. Detailed charts and trends.

Filter Management

Turn blocking categories on or off with a simple toggle. Customize protection levels per time of day.

Remote Control

Manage AdStop even when you're away from home. Secure cloud connection with 2FA authentication.

Smart Alerts

Get notified about security events, unusual traffic patterns, and device status changes.

Cross-Platform

iOS

Built with Capacitor — 4 screens: Home, Activity, Alerts, Profile

Android

Planned — same codebase via Capacitor

Desktop

Electron app for macOS, Windows, Linux

Web

Full Next.js dashboard accessible from any browser

Security & Updates

Security is built into every layer of AdStop, not bolted on as an afterthought.

Automatic OTA Updates

Firmware updates are delivered over-the-air with automatic rollback if anything goes wrong. Users are always on the latest version without lifting a finger.

Signed Device License

Each AdStop device has a digitally signed RSA-4096 license, ensuring authenticity. Factory provisioning prevents unauthorized cloning.

HMAC-Signed Communication

All device-to-cloud communication is authenticated with HMAC signatures. Commands use double-HMAC for critical operations like remote lockdown.

TLS Encryption

Cloud communication is secured via TLS. Full end-to-end encrypted channels are being deployed across all infrastructure components.

Additional Security Measures

- Two-Factor Authentication (TOTP) for user accounts
- Redis-backed distributed rate limiting on all endpoints
- Complete security audit log (immutable event trail)
- GDPR-compliant data export and deletion
- Intrusion detection and real-time security monitoring

Project Status

AdStop is a working project with real code. Here's where we are today.

Cloud Backend — 85%

Complete Next.js web app: 2FA auth, MQTT device management, OTA updates, Stripe payments, admin panel, security audit logging, rate limiting, GDPR. Remaining: production deployment and monitoring.

Firmware — 55%

Built on Pi-hole DNS filtering + custom Rust networking components. Python captive portal, OTA with auto-rollback, auto-configuration for 25+ router brands. Blocker: rewriting first-boot system.

Mobile App — 50%

4 cross-platform screens via Capacitor (home, activity, alerts, profile). 2FA, onboarding, dark theme, Electron desktop version. Missing: Android build, push notifications, app store publication.

Hardware — 45%

Bill of materials finalized, 3D case model, wiring diagram. Missing: thermal testing, CE/FCC certifications, retail packaging for the v1 launch.

🎯 Immediate priority: complete the end-to-end flow — power on → setup → network protection live.

Tech Stack

Cloud: Next.js 16, MySQL (Prisma), Redis, MQTT (Mosquitto), Stripe, Docker
Firmware: Rust (DNS), Python (portal), Bash (provisioning), Pi-hole (filtering)
App: Capacitor (iOS/Android), Electron (desktop), Tailwind CSS
Security: Argon2id, HMAC-SHA256, RSA-4096, TOTP 2FA, Zod validation

Market Opportunity

A growing market with no dominant hardware solution for consumers.

in the EU consumer market

Target Customers

Families with Children

Parents who want to protect kids from ads, gambling sites, and adult content without managing every device.

Privacy-Conscious Users

People who care about tracking and data collection but don't have technical skills for DIY solutions.

Smart Home Owners

Households with 10+ connected devices (TVs, consoles, cameras) that can't run traditional ad-blockers.

Remote Workers

Professionals who want a distraction-free home network with social media and ad blocking during work hours.

Business Model

Hardware sales with potential for recurring cloud subscription revenue.

Revenue Streams

Hardware Sales

Direct-to-consumer device sales. Hardware cost ~35€ at volume, with healthy margin potential at consumer pricing (TBD).

Cloud Subscription

Optional premium tier for advanced features: detailed analytics, custom blocklists, remote management, priority support.

B2B / Bulk

Office and co-working space packages. Multi-device management with centralized admin dashboard.

Distribution Channels

Direct Online

Company website with Stripe checkout. Lowest CAC, highest margin.

Amazon / Marketplaces

Reach millions of customers. Higher fees but massive exposure.

Electronics Retail

Partnership with retailers for physical shelf presence.

Tech Communities

Pi-hole / privacy forums, tech blogs, YouTube reviewers.

Unit economics: hardware BOM ~35€ at volume | Pricing strategy under evaluation | Stripe billing infrastructure already integrated

Competitive Landscape

Where AdStop fits in the ad-blocking ecosystem.

	Pi-hole Open-source DNS sinkhole	NextDNS Cloud DNS filtering	AdGuard Home Self-hosted DNS filter	AdStop Plug-and-play hardware
Setup	Complex — requires Raspberry Pi, terminal, SSH	Easy — change DNS settings	Moderate — needs server/NAS	2 minutes — plug in and go
Users	Technical hobbyists only	General consumers	Tech-savvy users	Everyone — zero tech skills
App	Web interface only, no mobile app	Mobile app available	Web interface, basic mobile	Full mobile + desktop app
Cloud	None — local only	Cloud-only, no local control	Optional cloud sync	Integrated cloud management
Hardware	DIY assembly required	None — software only	DIY or NAS required	Dedicated device included

AdStop is the only product that combines dedicated hardware + cloud management + mobile app in a zero-configuration consumer package.

Roadmap

From working prototype to market launch.

WE ARE HERE

Q2 2026
MVP Complete

- End-to-end flow working
- Cloud platform deployed
- First-boot system rewritten
- 10 beta units assembled

Q3 2026
Beta Program

- 50 users beta testing
- Mobile app on TestFlight
- Android build ready
- Iterate on feedback

Q4 2026
Pre-Orders

- CE marking process started
- Pre-order campaign launch
- First production batch (100 units)

2027
Scale

- App Store & Play Store launch
- Amazon marketplace listing
- B2B enterprise offering
- 1,000+ units target

Future Upgrades & Vision

AdStop v1 is just the beginning. Here's where we're heading after launch.

Custom PCB Design

Replace the Raspberry Pi with a custom-designed board. Target: cut production cost from ~35€ to ~15–20€ per unit, enable a slimmer form factor, and secure the supply chain.

AI Threat Detection

Anomaly detection for suspicious traffic, phishing, and zero-day domains. Network-wide telemetry creates a data moat that strengthens with every new device sold.

Built-in VPN

One-click network-wide VPN for the entire household. Opens a large adjacent market with recurring subscription revenue and stronger privacy positioning.

Smart Home Integration

Native integration with Apple HomeKit, Matter, Google Home, and Alexa. Voice control, automations, and seamless ecosystem interoperability.

Parental Controls Pro

Screen time scheduling per device, homework mode, bedtime mode, and location-based rules. A premium subscription tier targeted at families.

Enterprise Tier

B2B offering for offices, schools, and co-working spaces. Multi-location management, SSO/SAML, compliance reporting — much higher ACV per customer.

🚀 Our long-term vision: AdStop becomes the default privacy hub in every home — not just an ad blocker.

The Team

A small, focused team building something real.

Founder & Lead Developer

Full-stack architecture, cloud platform, firmware development. Designed and built the entire AdStop system from hardware to cloud.

- System Architecture
- Next.js / React
- Rust
- IoT / MQTT
- Security

Co-Founder / Hardware

Hardware design, PCB prototyping, 3D case modeling, manufacturing planning and supply chain.

- Electronics Design
- 3D Modeling
- Manufacturing
- Supply Chain

Design & UX

User interface design, mobile app UX, branding, and marketing materials.

- UI/UX Design
- Mobile Design
- Branding
- Marketing

Let's Build the Future of Home Privacy

We're raising a pre-seed round to bring AdStop from working prototype to market.

Use of Funds

- Complete product development (MVP → v1.0)
- CE/FCC certifications
- Initial marketing & pre-orders
- First production batch (100 units)
- App Store publication (iOS + Android)
- Operational runway (6 months)
